VERSION WITH MARKINGS TO SHOW CHANGES MADE TO CLAIMS

14. (Amended) An electron-emitting device comprising:

A) a [fiber containing carbon as a main ingredient] cathode electrode and a gate electrode arranged at an interval on a surface of a first substrate; and

B) [an electrode for controlling emission of electrodes from said] a fiber containing carbon as a main ingredient, arranged on said cathode electrode and connected electrically to said cathode electrode.

wherein said fiber containing carbon as a main ingredient has a plurality of graphenes layered so as not to be parallel to [the] an axis direction of said fiber.

16. (Canceled)

17. (Canceled)

19. (Amended) A light-emitting apparatus comprising an electron-emitting device according to any one of claims 14 [to], 15, or 18, and a light-emitting member.

20. (Amended) An image display apparatus comprising a plurality of electron-emitting devices and a light emitting member capable of emitting light when irradiated with electrons emitting from some of said plurality of electron-emitting devices,

wherein each of said plurality of electron-emitting devices is constituted by the electron-emitting device according to any one of claims 14 [to], 15, or 18.
